

**Building the future
of employee learning
and engagement**

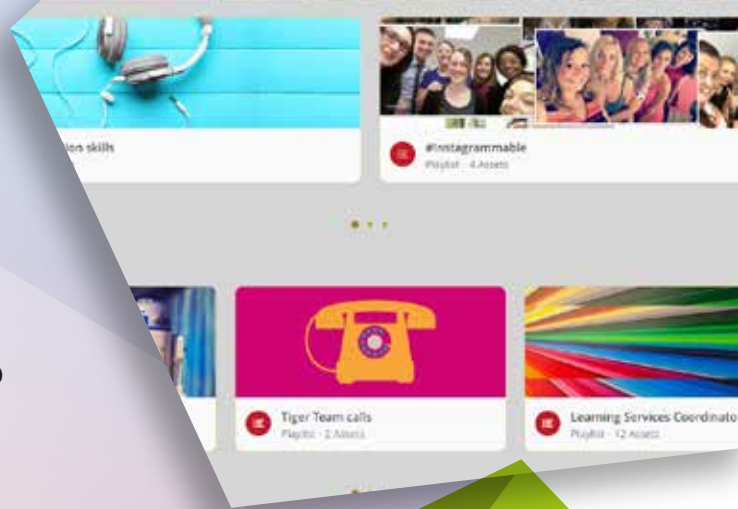

A Unique Learning Solution

Since 2011 the 5App Digital Hub has been transforming learning and employee engagement across the world. It is currently available to over 500,000 employees, with engagement rates of up to 96%. In the words of the Director of Learning at Greystar Partners, it's "a platform that is agile, flexible, with the ability to engage employees".

The Hub enables you to deliver...

- Digitalisation of the workflow, providing knowledge, learning and support at the employees' point of need
- Engagement of very different groups of employees all working towards the same business goals
- Significant impact on the business in terms of time, operational efficiencies, support and driving the company's vision and strategies from the top down
- A simple approach to a high end solution without the need for administrative training
- An intranet replacement, reflecting the all-in-one, inclusive nature of the platform, supporting teams and business units

By using the latest technology, e.g. Progressive Web Applications (PWA), enables instant access and updates across desktop, mobile and web based devices

THE WORLD**

5 Key Benefits

5App's intuitive design and ease of use, delivers rapid adoption and save company time. Learning is at the heart of the hub, using rapidly curated playlists of content that unite communities around shared values and interests. Constantly looking at the most relevant ways to deliver value to your business, the hub is clearly focused on employee engagement, simplicity and impact.

Engaging – we work closely with our clients and partners to ensure whatever your objectives, employees will love the platform and drive better results across the organisation.

Speed – to use, deploy and administer. We are breaking records for system deployment to 'live launch' compared to competitors.

Personalised – users can build their own skills and knowledge for today and for the future, using playlists of content from curated, owned and public sources.

Flexible – to integrate with LMS and other system. All content formats are supported. SCORM compatibility and much more.

Targeted – cross-functional teams and departments empowered quickly and effectively, wherever in the world they are, whatever device they have.

The great thing about the Hub is accessing L&D content in the same way we access content in our everyday lives.
